Grevillea "Robyn Gordon"

*Grevillea*ï 'Robyn Gordon'ï is aï grevilleaï cultivar which has been planted widely in Australia and other countries.
It is a shrub that grows to two metres high and three metres wide, with divided leaves. The deep red inflorescences are about 15 cm long by 9 cm wide and attract honeyeaters.
The cultivar, was a chance cross between a red-flowered form of Grevillea banksii and G. bipinnatifida, selected by the late plant collector David Gordon in Queensland for its prolific and sustained flowering.ï Pruning is usually not required but plants can tolerate moderate to heavy pruning if necessary. A sunny, well drained position is preferable in the garden and plants are tolerant of at least moderate frost. Fertilisers containing phosphorus are best avoided.ï

Category: Grevillee & Leptospermum
Families: Proteaceae
Genus: Grevillea
Species: "Robin Gordon"
Geographical Area of Origin: Oceania
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Gennaio / Febbraio / Marzo / Aprile / Maggio / Giugno / Luglio / Agosto / Settembre / Ottobre / Novembre / Dicembre
Flower: Raceme
Colore Fiori: Rosso
Favorite soil: Sub-acid / medium acid / Light sandy / Middle-Dough / Medium soil
Water needs: Low / little water / Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Tree / Grown as shrub / bush

Colore Frutti: Marrone
