Grevillea x semperflorens

Grevillea x semperflorens is a hybrid whose parents are said to be G. thelemanniana and a yellow-flowered form of G. juniperina.
The hybrid was found in a Plymouth (UK) garden in the late 1920 s.
Grevillea x semperflorens is an upright shrub that, in our garden, reaches a height of two metres. The narrow leaves may be linear or divided into segments crowned with a sharp point. Orange-red flowers are held in pendulous racemes.
The plants have proved to be hardy, very free flowering; frost resistant and once established have very low water requirements. An occasional light pruning is appreciated.
Propagation must be from cuttings to preserve the hybrid s characteristics.
Grevillea x semperflorens was probably one of the first named grevillea hybrids.

Category: Grevillee & Leptospermum
Families: Proteaceae
Genus: Grevillea
Species: semperflorens
Geographical Area of Origin: Oceania
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Gennaio / Febbraio / Marzo / Aprile / Maggio / Giugno / Luglio / Agosto / Settembre / Ottobre / Novembre / Dicembre
Colore Fiori: Rosso ï Arancione ï Rosa
Favorite soil: Sub-acid / medium acid / Light sandy / Middle-Dough / Medium soil
Water needs: Low / little water / Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Basket / Grown as shrub / bush

Colore Frutti: Marrone
