"Cipressino" oliv tree

Olea europaea Cipressino is a vigorous upright tree, getting its name from its similarity to the habit of the pencil-like Italian cypress. It is a very strong tree showing good resistance to coastal and sea conditions. It requires a pollinator to produce abundant olives.
This cultivar has its origins in Apulia, in South Italy as it was initially spread in the Taranto area with the dual purpose of wind breaking and for oil production. It is a plant with a great vegetative vigor and with a rapid and robust growth, an erect posture and dense foliage. It sprouts from the bottom, forming a columnar structure with long branches and shoots; that s why it is particularly ideal as a windbreak.

Category: Olea Europea
Families: Oleaceae
Genus: Olea
Species: europea "Cipressino"
Geographical Area of Origin: Mediterranean Europe
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Tree
Leaves: Lanceolate leaf
Colore Foglie: Verde ï Grigio
Flowering Period: Marzo / Aprile
Flower: Simple flower
Colore Fiori: Bianco
Favorite soil: Neutral / Middle-Dough / Medium soil
Water needs: Low / little water / Medium
Light Exposure: Full light / Full sun
Form: Clay pot /Terracotta /Earthenware pot / Bowl / Bonsai / Wired on stick / Plant on cane / Pom-pom shaped / Pyramid / Fitocella / Inverted cone / Tree / Spiral / Grown as shrub / bush
Colore Frutti: Verde ï Viola
