Thunberg s gardenia

Theï*Gardenia thunbergia*ï Thunb. (1780) is native to Mozambique and South Africa (Cape Provinces and Natal).
Shrub or evergreen small tree, tall up to about 5 metres, with whitish stems and virticillate leaves (3-4 per each knot), with wavy margins, with a usually ovate shape and of rather variable dimensions, up to about 15 cm of length and 6 of breadth, of a glossy intense green colour. The flowers, solitary and terminal, are intensely perfumed, about 10 cm wide, with 8-10 partially superposed petals, of a white colour tending to the cream yellow, on a corolla tube long up to about 12 cm. The fruits are woody and extremely hard, ovoid, 7-8 cm long, of greyish colour, persistent on the plant for long time, containing many flat and woody seeds. It reproduces by seed and cutting.
Much appreciated plant, in spite of its slow growth, due to its large perfumed flowers; can be cultivated in the tropical, subtropical and warm temperate areas, in full sun or partial shade, which temperatures which are not to go down under the -3 ï C. The soil must be well drained and, although it prefers rich and rather acid grounds, is less particular than other plants of Gardenia, so much to be utilized at times as rootstock for these last ones. The roots and leaves are utilized in the original countries in the traditional medicine and the wood, particularly hard, for small handicrafts.

Category: Flowering shrubs
Families: Rubiaceae
Genus: Gardenia
Species: thunbergia
Geographical Area of Origin: South Africa
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Semi-evergreen
Colore Foglie: Verde
Flowering Period: Settembre / Agosto / Luglio / Giugno
Flower: Simple flower

Colore Fiori: Bianco
Favorite soil: Middle-Dough / Medium soil / Neutral
Water needs: Medium / Low / little water
Light Exposure: Full light / Full sun / Medium shade / Half shade
Form: Grown as shrub / bush
Colore Frutti: Grigio
Parfumed: yes
