Madeira broom

Broom can be evergreen or deciduous, and can grow upright or prostrate. Broom is usually grown for its pea-like flowers that are often fragrant. There are dwarf, small and medium-sized shrubs. The foliage is somewhat feathery. Genista maderensis is a native of Madeira, where it grows to up to 7 mtrs.It is evergreen, and in late Spring and early Summer has masses of golden, fragrant flowers.
It develops a large number of branches that give the plant a disordered appearance, so for ornamental purposes it is pruned several times, especially after flowering. The ideal time to be marketed is when the flower bud turns from green to yellow.

Category: Flowering shrubs
Families: Fabaceae
Genus: Genista
Species: maderensis
Geographical Area of Origin: Mediterranean Europe / Middle-north africa
Climatic Zones: Mediterranean: South and islands, hills. USDA 10 a
Habit: Shrub
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Marzo / Aprile / Maggio / Giugno
Flower: Simple flower
Colore Fiori: Giallo
Favorite soil: Sub-acid / medium acid / Middle-Dough / Medium soil
Water needs: Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Tree / Grown as shrub / bush
Colore Frutti: Marrone
Parfumed: yes
