Kucle

Kucle is the product of the crossing of Fortunella margarita (kumquat) and Citrus clementina (clementine). This vigorous and highly decorative shrub offers an abundance of kumquat-like fruit, though slightly larger, with a deliciously acidic flavor and a clementine aftertaste. Like kumquat, it is consumed with the skin. Cold-resistant to -4 ï C, its open-air culture is reserved for regions with very mild climate; Elsewhere, it will preferably be grown in a large bin, wintered in the shelter of a frost in a greenhouse.
Kucle forms a compact, thornless shrub of the family Rutaceae. It reaches a height of about 3 m.

Category: Citrus
Families: Rutaceae
Genus: Citrus
Species: kucli (Fortunella margarita X Citrus clementina)
Geographical Area of Origin: South-East Asia
Climatic Zones: Sub-tropical, USDA 10 b (Southern Italy and islands)
Habit: Tree
Leaves: Evergreen
Colore Foglie: Verde
Flowering Period: Aprile / Maggio / Giugno / Luglio / Agosto / Settembre / Ottobre / Novembre
Flower: Corymb
Colore Fiori: Bianco
Favorite soil: Sub-acid / medium acid / Middle-Dough / Medium soil
Water needs: Medium
Light Exposure: Medium shade / Half shade / Full light / Full sun
Form: Espalier / Pyramid / Tree / Grown as shrub / bush
Colore Frutti: Arancione
Parfumed: yes
